#### • RESEARCH EXPEDITIONS

In 2005, I led an expedition of 4 scientists during 15 days in Storfjord, Svalbard to install a seismic and a GPS network on sea ice, within the framework of my project *Banquise* funded by the French Polar Institute. This was a first attempt to study sea ice fracturing and deformation from ice-tethered seismological tools. This launched subsequent field seismic studies that I organized and scientifically led within the framework of the FP6 Project *DAMOCLES* and the ANR project *WaveSIMM*, while not participating myself to the field campaigns in those cases.
