

APPENDIX F. Smoothing

Figure F1. Trade-offs between L2 norm of least squares inversion misfit and model roughness for (a) the coseismic models, (b) the largest aftershock model (November 15th, 2007), (c) the first post-seismic period model (November 16th to November 24th, 2007) and (d) the second post-seismic period model (November 25th to December 10th, 2007). The arrows mark the chosen roughness values.
